

## How We Get Your Fabric Ready to Sew

All Stitch Simple products are prewashed in cold water on delicate cycle and dried using a low temperature setting. This process reduces the possibility of shrinkage in future washes and also helps remove excess chemicals and dyes. We use only unscented or fragrance-free detergents and we do not use fabric softener. After washing, we carefully press and die cut our products to deliver you consistently straight edges that help your seams line up expertly each and every time.
